Pressure Testing:

Unable to obtain individual building pressure readings due to lack of hose bibs on exterior at site inspection. (See recommendations).

In order to ensure that each resident is receiving optimal water pressure, please schedule with your maintenance to perform a pressure testing on each building. Desirable water pressure is between 45 and 75 psi. High pressure can cause loud pipes, pinhole leaks in joints, and water hammering; pipes loudly banging inside of walls due to air in the water lines. While low pressure could be a sign of multiple problems; mineral deposits in pipes, leaks, or a faulty pressure regulator.
